yuyu

USER MANUAL · ORGANISERS, STAFF & ATTENDEES

Yuyu
User Manual

A complete guide to creating organisations, publishing free events, running registration and waitlists, emailing guests, checking people in at the door, and closing the loop with feedback, certificates, and a report.

Events & series · Custom sign-up forms · Waitlists & approvals · Designed emails · QR tickets · Offline check-in · Badge printing · Event websites · Feedback & certificates · Self-hosted

Edition
October 2026

Applies to
Yuyu 0.1.0

Audience
Organisers, door staff, attendees, instance admins

CONTENTS

What's inside

GETTING STARTED

1 Welcome to Yuyu 3
What the platform does and who each part is for

2 Your account 6
Sign up, verify, and the Profile, Registrations, Organisations and Security pages

ORGANISING

3 Organisations and teams 9
Your dashboard, a workspace, members, roles, invite links, co-organisers

4 Creating and publishing events 12
The event dashboard, details, Publishing, short links, cover photo, cloning

5 Event pages and programmes 16
Colour, sections, speakers, sponsors, venue, FAQ, resources, tracks, live delays

6 Registration forms 18
Answer types, ready-made questions, settings, and show-only-if logic

7 Recurring series 20
Weekly meetups, monthly circles, and other repeating events

8 Managing guests 22
Statuses, approvals, the waitlist, invites, edits, exports

9 Emailing your guests 25
Templates, five designs, placeholders, tests, review and undo

ON THE DAY

10 Tickets and check-in 28
QR tickets, the check-in desk, offline mode, the door station, badge printing

AFTER THE EVENT

11 Feedback, certificates and analytics 31
Feedback forms, the layered certificate designer, the funnel, and the PDF report

ATTENDING

12 For attendees 34
Finding events, registering, your ticket, cancelling, feedback, your data

ADMINISTRATION

13 Instance administration 36
The super-admin area, its step-up check, settings, and notes for self-hosting

14 Connecting other tools (API) 39
Tenant-bound API clients for reading events and attendance

REFERENCE

15 Troubleshooting and FAQ 41
Quick answers to the questions organisers ask most

16 Quick reference 44
Checklists and a glossary to keep at hand

Page numbers refer to the numbered pages after this contents page. Every chapter starts on a new page, so you can print only the chapters your team needs.

CHAPTER 1

Welcome to Yuyu

Yuyu is a self-hosted platform for running free events from the first announcement to the last certificate. This chapter explains the moving parts so the rest of the manual makes sense.

What Yuyu is

Yuyu lets an organisation publish events, collect registrations with a custom form, manage capacity and waitlists, email guests with designed messages, issue QR tickets, check people in at the door (even offline) and print their badges, publish a full event website with a programme, and gather feedback and issue certificates afterwards. Everything runs on your own server, so attendee data never leaves your infrastructure.

> **ALWAYS FREE TO ATTEND**
>
> Yuyu deliberately has no payments, ticket sales, refunds, or revenue features. Every registration is free for the attendee. If you need paid tickets, Yuyu is not the right tool.

Who this manual is for

ORGANISERS

Owners, admins and co-organisers

Create organisations, publish events and series, build registration forms, manage guests, send emails, and read the numbers. Chapters 3 to 11.

DOOR STAFF

Check-in volunteers

Scan tickets, look up guests, print badges, and work offline. Chapter 10 is written for you.

ATTENDEES

People registering

Find events, register, keep your ticket, cancel if plans change, give feedback, and download a certificate. Chapter 12.

INSTANCE ADMINS

Super-admins and developers

Configure email and sign-in for the whole installation, watch delivery and security, and connect other tools through the API. Chapters 13 and 14.

The big picture

QR tickets, door station, badges

›

Follow-up
Feedback, certificates, report

Key terms

Organisation	The workspace that owns events. Members, events, invitations, and files all belong to exactly one organisation. You can belong to several.
Event	A single, standalone happening with its own dates, registration form, event page, and guest list.
Series	A recurring schedule (for example, every Tuesday). Each occurrence is an *instance* with its own registrations.
Registration	One person's sign-up (also called an RSVP). In the dashboard it is shown as **Going**, **Waitlist**, **To approve**, or **Declined**.
Ticket	A private link with a QR code, issued to guests who are going and used at check-in.
Co-organiser	A person given specific permissions on one event without joining the organisation.
Short link	An optional seven-character link such as `/aB3x9Kq` that always points at an event's current page.
Super-admin	The single account allowed to configure the whole installation (email, Google sign-in, monitoring).

Where things live

Area	Address	Who sees it
Event page	`/your-org/your-event`	Anyone the event's settings allow
Short link	`/aB3x9Kq`	Same as the event page it points to
Organisation page	`/your-org`	Public; lists live, listed events
Discover	`/discover`	Public; search, dates and sorting
Your dashboard	`/dashboard`	Signed-in users

Area	Address	Who sees it
Your account	`/account` (Profile, Registrations, Organisations, Security)	Signed-in users
Ticket	`/ticket/<private-code>`	Anyone holding the link
Door station	`/your-org/your-event/check-in`	Staff with the station PIN
Super-admin area	`/super-admin`	The configured super-admin only

CHAPTER 2

Your account

Everything in the dashboard starts with a verified account. This chapter covers signing up and signing in, then walks through the four pages of your account area.

Creating an account

1. **Open the sign-in page**
   Go to `/login` and choose the **Create account** tab. (If the tab is missing, your instance administrator has turned off new accounts.)
2. **Enter your details**
   Provide your name, email address, and a password of at least 12 characters.
3. **Verify your inbox**
   Yuyu emails you a verification link that works for one hour. Open it and choose **Confirm email**. Missed it? Use **Resend verification email**.
4. **Sign in**
   Return to `/login` and sign in with your email and password.

> **WHY VERIFICATION MATTERS**
> A password account cannot sign in until its email is verified. Verification proves you control the address that attendees will see as the organiser.

Signing in with Google

If your instance administrator has enabled Google sign-in, a **Continue with Google** button appears on the sign-in page. Google accounts count as verified and rely on Google's own security policies. If a password account with the same address exists but is not yet verified, verify it first.

Forgot your password?

Use **Forgot password?** on the sign-in page and then **Send reset link**. Yuyu emails a one-time link. Setting a new password signs you out on other devices and keeps any authenticator you had set up.

Signing in with two-step verification

If you turned on two-step verification, Yuyu asks *Verify it's you* after your password. Enter the six-digit code from your authenticator app or one of your recovery codes, then choose **Verify and sign in**.

The account area

Open it from the account card at the bottom of the dashboard sidebar (**Account settings**). The same menu switches between light and dark mode and signs you out. The account area has four tabs: **Profile**, **Registrations**, **Organisations**, and **Security**. The header shows whether your email is verified and whether two-step verification is on.

Profile

Account › Profile

- **Profile:** your display name and photo (JPEG, PNG, or WebP up to 5 MB). Without a photo, Yuyu uses your Google picture, then Gravatar, then your initials.
- **Email:** where Yuyu sends your tickets and account emails, with its verification status. Changing the address is not available yet.
- **Appearance: Light**, **Dark**, or **System** (follows your device). This is saved in the current browser only.

Registrations

Account › Registrations

- **Upcoming** and **Past** list the events you registered for, with their status (Confirmed, Waitlisted, Waiting for approval, Checked in, and so on). Each row has **View ticket** and **Event page**.
- **Cancel registration** is offered until the event ends, unless you are already checked in.
- **Certificates** lists certificates you earned through feedback forms, with **View certificate**.
- **Download my data** gives you a JSON file with your profile, organisations, registrations and answers, feedback, and event roles. Passwords, security codes, and ticket links are never included. You can download it a few times per hour.

Organisations

Account › Organisations

- **Your organisations** shows each organisation with your role (Owner, Admin, or Member) and its upcoming events, with **Open dashboard**.
- **Leave** removes only your own membership. If you are the only owner, leaving is blocked. Yuyu does not offer ownership transfer yet, so an only owner stays until the organisation is deleted.
- **Event co-organiser roles** lists events where you help as a co-organiser and what you are allowed to do there.
- **Pending invitations** lists co-organiser invites sent to your address. Accept them from the link in the invitation email.

Security

Account › Security

Card	What it does
Password	Change your password with your current one (Google-only accounts can **Add a password**). Changing it signs you out on every device.
Two-step verification	**Set up authenticator**: scan the QR code with an app such as Google Authenticator, 1Password, or Authy and enter a six-digit code. Afterwards each password sign-in asks for a code.
Recovery codes	Shown once when you turn on two-step verification. Each works once. Store them safely; they are your way back in if you lose your phone.
Sign-in methods	Shows whether you have an email and password and whether Google is connected.
Recent security activity	Your last ten security events, such as password changes, two-step verification turned on or off, and sign-outs.
Sign out everywhere	**Revoke all sessions** signs you out on every device, including this one. Use it if you suspect someone else has access.

CODES ARE SINGLE-USE

A time-based code can only be used once, even across devices. If you are asked for a code twice in a row (for example, signing in and then entering the super-admin area), wait for the next code to appear.

Recommended setup for organisers

- ✓ Verify your email before the first event.
- ✓ Turn on two-step verification and store recovery codes.
- ✓ Use a password manager for the 12+ character password.
- ✓ Use Sign out everywhere when you change devices.

CHAPTER 3

Organisations and teams

An organisation is the home for your events and the boundary for who can see what. Set it up once, then bring in the people who help you run things.

Your dashboard home

Dashboard › Home

The first time you sign in, a **Get set up** checklist walks you through creating your organisation, adding a logo, creating your first event, and publishing it. After that, the home page shows:

- A reminder bar when people are waiting for approval or events are still drafts, with **Review approvals** and **Finish draft**.
- A **Next up** card for your next event with **Open check-in** and **Manage event**. From two hours before the start it switches to event-day mode: a big check-in count, what is on stage, and recent arrivals.
- Weekly numbers (upcoming events, sign-ups, check-ins, feedback), **Your events** (Upcoming, Drafts, Past), recent activity, and your organisations. Events you co-organise for other organisations appear in their own section.

The sidebar on the left can be collapsed to icons. Inside an organisation it shows the organisation switcher, then **Events**, **Series**, **Members**, and **Settings**, plus **View public page**.

Create an organisation

Dashboard › New organisation

1. **Choose a name**
   This appears on public pages and in emails.
2. **Pick a web address**
   Short, lowercase letters, numbers, and dashes, unique across the installation. Yuyu tells you whether it is available. It becomes `/your-slug` and the start of every event address.
3. **Add a description and logo**
   Optional, but both are shown on the public organisation page. Logos are resized and cleaned automatically.

The person who creates the organisation becomes its OWNER. Yuyu then opens the new public organisation page.

The organisation workspace

Dashboard › Your organisation

The workspace lists events under **Upcoming**, **Drafts**, and **Past**, with a search box and a small month calendar beside it. Use **Create event** and **New series** at the top, and see your series and team in the side panels. A brand-new organisation shows a setup checklist instead.

Roles

Role	Can do	Cannot do
OWNER	Everything, plus change roles, API access, and deleting the organisation.	Leave or be removed while they are the only owner.
ADMIN	Create, publish, and run events and series: forms, guests, invites, emails, check-in, feedback, and exports.	Change roles, manage API access, delete the organisation.
MEMBER	See the workspace and its events, including drafts.	Change anything.

Inviting members

Dashboard › Organisation › Members

1. **Create a link**
   In **Invite people**, choose **Create link** and then **Copy link**. Each link adds one person as a MEMBER, works once, and expires after seven days.
2. **Share the link privately**
   The person opens `/join/org/<code>` while signed in and chooses **Accept invite**. Treat the link like a password.
3. **Promote if needed**
   After they join, the owner can change their role to Admin from the team list.
4. **Revoke unused links**
   Every open link is listed under **Open links** with a **Revoke** button.

The team list can be filtered by Everyone, Admins, and Members. Owners can change roles and **Remove** people. A **What each role can do** card summarises the roles for your team.

Co-organisers

Sometimes you need help from someone who should not see the whole organisation, such as a volunteer who only runs the door. Co-organisers get specific permissions on **one** event and do not join

the organisation:

Permission	Grants
Edit details	Change event information and content.
Registrations	See guest answers, approve or decline, give waitlisted guests a spot, export, and copy ticket links.
Attendee invites	Maintain the invite list for invite-only events.
Check-in	Use the check-in desk, including offline mode and badge printing.
Publish and schedule	Publish or take down the event and manage the programme and live delays.

Owners and admins invite co-organisers from the event's **Settings** tab (or **Manage co-organisers** on Overview): enter an email, tick what they can do, and choose **Send invite**. They receive an email with a link (`/join/event-collaborator/<code>`) that expires after seven days and must sign in with the invited address to accept. You can **Cancel invite** before it is accepted, and later **Edit** permissions or **Remove** access.

Organisation settings

Dashboard › Organisation › Settings

Edit the logo, name, and description, with a live preview of the public page. The public page address is shown with **Copy link** and cannot be changed. Owners also see the **API access** card (**Manage API access**, Chapter 14) and **Delete organisation**, which asks you to type the organisation's name to confirm.

> **DELETION IS PERMANENT**
> Deleting an organisation removes its events, registrations, invitations, uploaded files, and API clients. There is no undo. Export anything you need first.

CHAPTER 4

Creating and publishing events

An event in Yuyu is more than a date. It decides who can see it, who can sign up, and how many places there are. This chapter covers creating an event, the event dashboard, and the Publishing section.

Create an event

Dashboard › Organisation › Create event

The **Create event** dialog has three short steps:

1. **Basics**
   Title, **About the event** (required), and up to 12 tags. Press Enter or a comma after each tag.
2. **Schedule**
   Start, end, and timezone. The start must be in the future.
3. **Location & platform**
   Tick **Online event** and paste the meeting link, or enter the venue and an optional Google Maps **Map link**.

New events start as a **Draft**, visible only to your team, until you make them live.

The event dashboard

Dashboard › Organisation › Event

The header shows the date, title, status, and where and when it happens, with **View page**, a copy-link button, and **Open check-in**. Admins see a strip of key numbers (Going, Waitlist, To approve, Checked in). After the event ends, owners and admins also get **Download PDF report**. Below the header are eight tabs:

Tab	Purpose	Chapter
Overview	Readiness checklist, sign-ups chart, people waiting for approval, Share card with the link and short link, and an at-a-glance summary	4
Guests	**People** (the guest list) and **Invites** (the invite list)	8
Event page	**Details** (including Publishing), **Page & programme**, and **Registration form**	4, 5, 6
Emails	Designed emails to selected groups of guests	9

Tab	Purpose	Chapter
Check-in	Check-in desk, door station, attendance export, badges	10
Feedback	Feedback form, responses, certificate designer	11
Analytics	Key numbers, sign-up funnel, PDF report	11
Settings	Co-organisers, event address, clone, embed code, delete	3, 4

Overview: is it ready?

The readiness card ticks off what is done: published, cover image, programme, registration form, door station PIN, people waiting for approval, and a first email. Each open item has a button that takes you to the right place, including **Publish event**. **Waiting for you** lets you **Approve** or **Decline** requests straight from the Overview.

Event details

Event › Event page › Details

Card	Fields
Basics	Title, tagline (a short line under the title), event page logo, **About the event** (rich text, required), and comma-separated tags used by search.
Cover image	The banner at the top of the event page; see the cover photo editor below.
Schedule	Start, end, and timezone. Attendees always see times in the event's timezone.
Location	**Online event** switch, venue or meeting link, and an optional map link so guests can open directions.
Publishing	Who can see it, who can find it, and how sign-ups work (below).

Edits collect in a bar at the bottom of the screen: choose **Save changes** or **Discard**.

Publishing

The Publishing card answers three questions and shows a live summary line at the top, for example *"Live. Listed publicly, anyone can sign up · 120 spots · closes 2 hours before."*

Who can see this event?

Draft

Only your team can see it. Nobody can sign up yet.

Live

The event page is public and people can sign up.

Offline

Taken down. The link stops working; guests keep their places.

Who can find it?

Everyone

Listed on your organisation page, Discover, and search.

People with the link

Not listed anywhere. Share the link with who you want.

Invited people only

Only people on the invite list (Guests › Invites) can open the page.

The **Approve each sign-up** switch makes people ask to join and wait until you accept them in Guests. It works with Everyone (the event stays listed publicly) and with People with the link. Invited people only does not need it, because invited people are confirmed when they sign up.

Sign-ups

- **Limit the number of spots:** set how many places there are. When it is full, new sign-ups join the waitlist. Off means unlimited.
- **Close sign-ups:** pick one rule. **At the end** (open until the event ends), **Before start** (a number of minutes, hours, or days before the start, which moves with the start time), or **Set time** (an exact date and time, no later than the start). After this, the sign-up button turns off.
- **Show how many are going:** guests see the number of sign-ups on the event page.

> **ONE SWITCH**
> Draft, Live, and Offline control both the event page and the sign-up form together. You cannot have a live sign-up form on a page that is not live, which prevents half-ready events going public by accident. Other screens may still call these states Draft, Published, and Hidden.

Sharing: links and short links

The **Share** card on Overview shows the event's address with a copy button. Owners and admins can also choose **Create short link** to get a seven-character link such as `yourdomain/aB3x9Kq`, which is handy for posters and slides. It keeps working when you change the event's address and still respects the event's privacy and invite rules. **Regenerate** creates a new code and the old short link stops working.

The cover photo editor

Drop, paste, or choose a JPEG, PNG, or WebP image up to 5 MB, then use **Edit** to open the editor:

- **Shape:** Event page banner (16:7, recommended), Wide (16:9), or Square.
- **Position:** drag to move, scroll or pinch to zoom, and use the arrow keys to nudge. The photo always fills the frame.
- **Crop tab:** rotate left or right, flip, a straighten slider, **Show other crops** to see where the event page, cards, and social shares cut it, and **Reset crop**.
- **Adjust tab:** looks (Original, Vivid, Warm, Cool, Mono, Soft) and brightness, contrast, and saturation sliders.
- **Where it appears:** previews of the event page header, event card, and social share. Choose **Apply** when you are happy.

Every image is resized, stripped of hidden metadata, and re-encoded for safety on the server.

Address, cloning, embedding, and deletion

Event › Settings

- **Event address** changes the end of the URL. Changing it breaks links you already shared (short links keep working).
- **Run it again** › **Clone event** makes a new event with the same information. Guests and invites are not copied.
- **Put it on your website** gives you code for a register button or the whole event page. Your administrator must allow your website's address first.
- **Delete event** permanently removes the event and its registrations. You type the event address to confirm.

CHAPTER 5

Event pages and programmes

Each event can grow from a simple registration page into a full website with a schedule. This lives on **Event page › Page & programme**. Use **Open public page** at the top to see the real page in a new tab.

Colour

Choose the accent for the hero band, buttons, and links on the event page. Pick a preset (**Ember**, **Iris**, **Teal**, **Ink**) or **Custom**, which opens a picker with a saturation and brightness area, a hue slider, a hex field, and, in browsers that support it, an eyedropper to pick a colour from the screen. A sample register button and link show the result; text and links automatically use a darker shade so they stay readable. **Use the default colour** goes back to Ember.

Sections

The event page is built from sections. Reorder them with the arrows, switch off anything you don't need, and open a section to edit its content. Section changes are saved with the bar at the bottom of the screen.

Section	Content
Hero	Cover, title, tagline, dates, logo, and the register button.
About	The description from Details.
Highlights	Short cards with a title, description, and optional icon: "3 tracks", "Free lunch", "Hiring booth".
Programme	The schedule, grouped by track, with links to session pages.
Speakers	Name, photo, headline, organisation, biography, and LinkedIn or X links. Each speaker gets a page at `/your-org/your-event/speakers/<slug>`.
Sponsors	Logo, description, and website, grouped by tier: Platinum, Gold, Silver, Partner, Community partner.
Venue	Location and map link from Details. Hidden automatically for online events.
FAQ	Question and answer pairs.
Resources	Links to slides, recordings, or handouts, for the event or a specific session.

Under **Section content**, each highlight, speaker, sponsor, resource, and FAQ is saved on its own and has a **Visibility** of Published, Draft, or Hidden, so you can prepare a sponsor or speaker before revealing them.

> **RELEASE GATE**
> Page content follows the event's status. Nothing is public while the event is a draft, and taking the event offline hides the whole page.

Building the programme

Event page › Page & programme › Open schedule

The **Programme** card summarises your sessions, tracks, and speakers. **Open schedule** opens the programme schedule page (it needs the Publish and schedule permission).

1. **Create tracks**
   A track is a parallel lane such as *Main Hall*, *Workshop Room*, or *Online stream*. Rename and reorder tracks as needed. Single-track events still need one track.
2. **Add sessions**
   Give each a title, description, planned start and end, track, type (Keynote, Talk, Panel, Workshop, Fireside chat, Networking, Break, Other, or your own), speakers, and visibility.
3. **Attach resources**
   Add slides or links to a session so they appear next to it.
4. **Check overlaps**
   A **Time overlap** chip appears when two sessions in the same track overlap. It is allowed, but attendees may need guidance. Overlaps across tracks are normal.

Live delays on the day

When the keynote runs long, set **Delay from this session (min)**. The delay affects only later sessions *in the same track*, so a late start in the Main Hall does not shift the Workshop Room. Sessions then show both the planned time and the live time ("N min behind"), and the public schedule at `/your-org/your-event/schedule` updates straight away.

Session and speaker pages

Each published session has its own page with the description, time, track, speakers, and resources. Each speaker page lists their biography and sessions. Both are linked from the programme and can be shared directly.

CHAPTER 6

Registration forms

Every guest gives their name and email. Add your own questions to collect dietary needs, T-shirt sizes, affiliations, or anything else the event needs.

Editing the form

Event › Event page › Registration form

Name and email are **Always collected**. Under **Your questions**, choose **Add question** at the top or **Add another question** at the bottom; the picker opens where you asked. A **Live preview** beside the list updates as you edit. Each question card can be marked **Required**, moved up or down, duplicated, edited, or deleted (with a short **Undo**).

Answer types

Type	Best for
Short answer	A name, a company, one line of text
Paragraph	Longer answers like questions or notes
Multiple choice	Pick one from a short list
Dropdown	Pick one from a longer list
Checkboxes	Pick as many as apply
Yes / no	A single tick, like a consent
Email	Checked to look like an email address
Phone	International phone number
Number	Whole or decimal number, with optional limits
Date	A calendar date, with optional earliest and latest

Ready-made questions

The **Ready-made** tab of the picker adds a finished question in one click, which you can edit afterwards: Organisation or company; Job title or role; Phone number; Dietary needs (Vegetarian, Vegan, Gluten-free, Halal, No nuts, plus Other); Accessibility needs; T-shirt size (XS to XXL); How did

you hear about this event?; Experience level; I'm happy to appear in event photos; and I agree to the code of conduct (required).

Question settings

- **Help text** shown under the question, and an **Example answer** shown faintly in the empty box.
- **Choices**: add them one by one or **Paste a list**, one per line. Duplicates are merged.
- **Allow an "Other" answer** adds an Other choice with a short text box.
- **Limits**: fewest and most characters, lowest and highest number, earliest and latest date, or **Up to how many choices?** for Checkboxes. Leave blank for no limit.

Show this question only if…

Ask a question only when an earlier answer makes it relevant. Pick an **Earlier question** (a Multiple choice, Dropdown, Checkboxes, or Yes / no question above this one) and tick the answers that should reveal it. Such questions are marked **Conditional**. Yuyu warns you if a rule breaks, for example after reordering, and offers **Move it below** or **Remove rule**.

The server checks every answer against the current form, enforces every setting, and drops answers to questions that were hidden by a rule, so a modified browser cannot bypass required fields or submit options you did not offer. Deleting a question also deletes the answers already given to it.

Tips for good forms

- ✓ Keep required questions to what you truly need.
- ✓ Use Multiple choice when there are four options or fewer.
- ✓ Use Yes / no for photo consent or a code of conduct.
- ✓ Add Organisation and Job title if you plan to print them on badges.

What attendees see

The register button opens a sign-up dialog in the event's colour. Signed-in attendees have their name and email prefilled. The same person cannot register twice for the same event or occurrence; Yuyu matches on the signed-in account or the email address.

CHAPTER 7

Recurring series

A series describes a repeating schedule once. Yuyu then creates individual occurrences, each with its own registrations, so regulars can sign up for the dates they can make.

Create a series

Dashboard › Organisation › New series

Field	Notes
Title and description	Shared by every occurrence.
First occurrence start / end	Sets the time of day and the length of each occurrence.
Recurrence (RRULE)	A standard calendar rule, for example `FREQ=WEEKLY;BYDAY=TU` or `FREQ=MONTHLY;BYDAY=2TH` (second Thursday). Add `COUNT=12` to stop after 12. The rule is fixed once the series is created.
Timezone	Occurrences follow this zone across daylight-saving changes.
Capacity per occurrence	Optional; each occurrence has its own waitlist.
Status and Audience	Draft or Published, and Public, Hidden link, Approval required, or Invite only. These match the Publishing choices for events (Chapter 4).

Managing a series

Dashboard › Organisation › Series

- **Series details** edits the shared fields, with **Delete series**.
- **Invites** holds the email list for invite-only series; it applies to every occurrence.
- **Schedule items** define a running order that repeats each time, with live delays.
- **Upcoming instances** lists the dates, each with **View event**.
- **Attendees** shows the guest list for the next occurrence, with search, a filter for guests or signed-in users, and **Download CSV**.

Public occurrence pages

Each occurrence has a public page at `/your-org/i/<occurrence-id>` showing how often it repeats, a **Join on <date>** box, and **View live schedule**. The organisation page lists upcoming occurrences alongside standalone events.

> **SERIES VERSUS EVENT**
> Use a series when the format repeats and attendees pick dates. Use a standalone event when it needs its own website, programme, sponsors, emails, feedback form, certificate, co-organisers, or short link. Those features are available on standalone events only.

CHAPTER 8

Managing guests

Registrations move through a small set of states. Once you know them, the Guests tab becomes a simple control panel for the whole guest list.

Registration statuses

To approve
Only when you approve each sign-up

›

Going
Has a ticket

›

Checked in
Arrived at the door

Status	Meaning	Email sent
Going	Has a place and a ticket with a QR code (confirmed).	Confirmation with ticket link and a calendar (.ics) invitation
Waitlist	Signed up after the event was full. Holds a queue position.	Waitlist notice
To approve	Asked to join and is waiting for your decision.	Received notice; confirmation on approval
Declined	Declined by an organiser.	Decision notice

The guest list

Event › Guests › People

- **Filter** with the pills All, Going, Waitlist, To approve, Declined, and Checked in; narrow to **Guests only** or **Signed-in users**; and **search** by name or email. The list shows 25 people per page.
- **Approve** or **Decline** people waiting for approval. The Guests tab shows how many are waiting.
- **Give a spot** to someone on the waitlist when you free up space.
- **Answers** opens a guest's form answers inline.
- The **More actions** menu offers **Copy ticket link** (to resend a lost ticket), **Edit registration or transfer ticket**, **Undo check-in**, and **Remove RSVP**.
- **Add guest** registers a walk-in or VIP on their behalf and emails their ticket. Capacity and the event's rules still apply.
- After **Remove RSVP**, an **Undo** button appears briefly in the confirmation message so a mis-click can be reversed.

Editing and transferring tickets

For a guest who registered without an account, you can correct their answers or change the name and email to **transfer the ticket** to someone else. The ticket link, status, and check-in state stay the same. Registrations made by signed-in users can be viewed, but their ownership cannot be transferred.

Waitlist behaviour

When the spots are full, new registrations join the waitlist in order of arrival. When a guest who is going cancels, the person who has waited longest is moved to Going automatically and emailed a ticket (on events where you approve each sign-up, you decide instead). You can also give a spot out of order with **Give a spot**.

> CHANGING CAPACITY
>
> Raising the number of spots does not move the whole waitlist at once. Use **Give a spot** for the people you want so they each receive a ticket email.

Invites

Event › Guests › Invites

1. **Add email addresses**
   Type an address and choose **Add**. For events set to *Invited people only*, only these addresses can register. Matching ignores capital letters.
2. **Invitation emails go out**
   Each address you add is emailed a link to the event's registration page. Emails are queued and delivered in the background; delivery continues even if you close the tab.
3. **Remove addresses**
   Removing someone from the list does not cancel a registration they already made. No new invites can be added after the event has ended.

Exports and reports

Export	Contents	Where
Download CSV	Every registration with name, email, status, registration date, check-in time, ticket link, and all form answers.	Guests › People
Export emails	Names and email addresses for the guests currently shown, one row per address.	Guests › People
Export attendance	Who registered and who arrived, with check-in times.	Check-in tab

Export	Contents	Where
Event report (PDF)	Counts-only summary of the whole event. Owners and admins, after the event ends.	Header and Analytics tab
Feedback CSV	All feedback responses (Chapter 11).	Feedback tab

Exports are recorded in the organisation’s audit log, so you can see who downloaded personal data and when.

CHAPTER 9

Emailing your guests

Send reminders, agenda updates, logistics, and thank-yous to people who already registered, without leaving Yuyu or exporting addresses. Everything lives on the **Emails** tab.

Writing an email

Event › Emails

1. **Pick a starting point**
   Choose General update, Reminder before the event, Know before you go, Agenda update, or Thank you and feedback. **More templates** adds Schedule or venue change, Waitlist update, Speaker announcement, Event cancelled, Pending approval update, Live update on the day, Sorry we missed you, and Slides and resources. A template fills in the subject, the message, and a suggested audience. Everything stays editable.
2. **Choose who gets it**
   Tick one or more groups (Going, Waitlist, To approve, Declined) and optionally narrow to people who **Checked in** or **Didn't check in**. Yuyu shows how many people will get it: one email per address, even if someone registered twice.
3. **Write it**
   Use the toolbar for bold, italic, headings, lists, quotes, and links. **Button** inserts a call to action (View your ticket, Open the event page, Share your feedback, or your own). **Placeholder** inserts details filled in for each recipient (below).
4. **Choose a design**
   Pick one of five designs in the preview (below).
5. **Check the preview**
   The preview is rendered by the server with the real email template and example values, exactly as it will arrive. Switch between **Phone** and **Desktop** widths.
6. **Send a test to me**
   The test goes only to your own verified address with *[Test]* in the subject. If you are registered and going to the event, the ticket link opens your own ticket; otherwise it opens the event page.
7. **Review and send**
   Choose **Send to N people**. The review step shows the recipients and subject; tick **I've checked the preview and want to email N people** to enable sending. A five-second countdown follows with **Undo**, and leaving the page during the countdown also cancels it.

Placeholders

Shown as	Filled in with
Attendee name	The recipient's name
Event title, Date & time, Location	The event's details
Event page link, Programme link, Feedback form link	Links to the event page, its schedule, and its feedback form
Ticket link	The recipient's own private ticket, for guests who are going
Organisation	Your organisation's name

Attendee name, Event title, Date & time, and Organisation can also be used in the subject line.

Five designs

Classic
Dark header with your organisation's name.

Minimal
Plain and quiet, like a personal note.

Accent band
A bold header in the event's colour.

Photo header
Leads with the event's cover photo. Add a cover image first; without one, sent emails fall back to a colour band.

Letter
Warm paper and a serif heading.

The design you choose is stored with the email and used for the preview, the test, and every delivered copy.

Sent before

The last 20 emails are listed under **Sent before** with who sent them, when, the audience, and how many people received them. **Reuse** loads one back into the editor, design included.

How delivery works

Each recipient gets their own email, queued and delivered in the background a few at a time, so a large audience takes a few minutes. Ticket links are only added for guests who are going, and anyone who leaves the chosen audience before delivery (for example, by cancelling) is skipped.

> **KEEP IT RELEVANT**
> Only people who registered for this event can be reached, and sends and tests are limited per hour. Yuyu does not yet offer an unsubscribe link, so keep messages about the event itself. Feedback links are never emailed automatically; send them yourself with the Thank you and feedback template.

CHAPTER 10

Tickets and check-in

On the day, speed and reliability matter more than anything. Yuyu gives you a check-in desk that works on any phone, a mode that works without Wi-Fi, a door station volunteers can use without an account, and badges printed as people arrive.

How tickets work

Every guest who is going gets a private ticket link containing a long random code. The ticket page shows the event, date and time, venue, the guest's name, and a QR code of that code, with **Add to calendar** and **Save ticket** (a picture of the ticket). For in-person events with a map link, the venue opens the map in a new tab. Waitlisted and pending registrations do not have a scannable ticket, which prevents queue-jumping at the door.

When the guest is checked in, an open ticket page **tears off its QR stub live** and shows *You're checked in* with the time, without a reload. Reopening a checked-in ticket shows the torn ticket with no QR code.

> **TICKET LINKS ARE THE KEY**
> Anyone holding a ticket link can check in as that guest. Do not post ticket links publicly or paste them into shared documents.

The Check-in tab

Event › Check-in

The tab shows when doors open and how many people have arrived, with **Open check-in** to start the desk. It also explains what happens **At the door**: guests who are going are let in by a scan; waitlisted guests need an override; people waiting for approval, declined, or holding a wrong ticket are blocked with the reason shown. **Export attendance** downloads who registered and who arrived.

The check-in desk

Available to owners, admins, and co-organisers with the Check-in permission. On a phone or tablet it offers three ways to check someone in:

Scan QR

Point the camera at the guest's ticket. The browser asks for camera permission the first time. The code holds only the secret ticket link.

Manual code

Paste the ticket URL or code if the screen is cracked or the camera is unavailable.

Search attendees

Search by name or email and check in directly from the results.

Each check-in asks you to **Confirm** (press Enter). Already checked-in tickets are flagged so a shared screenshot cannot be reused. Switch on **Override waitlist** to let waitlisted guests in at the door; people waiting for approval and declined registrations stay blocked. **Recent check-ins** lists arrivals with an **Undo** for mistakes.

Working offline

1. **Install the check-in app**
   Where the browser offers it, use **Install check-in app** to add the desk to the device's home screen.
2. **Make available offline**
   Before you lose connectivity, save the guest list to the device. It is stored only in that browser and expires after 24 hours; use **Refresh roster** to update it.
3. **Check in as usual**
   Scans and searches work against the saved list. Each check-in is queued on the device.
4. **Sync when back online**
   The queue uploads automatically when a connection returns, or use **Sync**. Every check-in keeps its original time.

The saved list contains personal data. Use **Remove offline data** after the event (sync first).

The door station (no account needed)

`/your-org/your-event/check-in`

For volunteers who should not have dashboard access, an admin turns on the **Door station** on the Check-in tab and shares the station link (or its QR code) and the 8-digit PIN.

- **Turn on station**, **Show PIN**, **Copy link**, **New PIN**, and **Turn off station** are for organisation admins only. A new PIN immediately locks out every device that used the old one.
- The station opens from **24 hours before** the event starts until **1 hour after** it ends.
- Volunteers can scan, search, check in, and undo. The station works online only; it cannot save the guest list offline or download the full guest export.
- Turn the station off when the event is over.

Printing badges

Switch on **ID card printing** on the check-in desk. From then on, every check-in (scan, manual code, or search) opens a quick print sheet showing that guest's real badge with **Print badge** (press Enter), **Skip**, and **Edit design**. Print at 100% (actual size), without headers or footers.

Set up cards opens the badge designer:

Option	Details
Style	**Classic** (thin frame), **Bold** (heading on a black band, name in capitals), or **Minimal** (just the name). All are black and white and print cleanly on laser and thermal printers. The name is always the largest text.
Badge stock	A6, 4 × 6 in, 3 × 4 in, 4 × 3 in, ID card (CR80), or a custom size in millimetres, in portrait or landscape. Layouts and type scale to the stock.
Text	Heading (the event title by default), an optional badge label such as ATTENDEE, and an optional footer (your organisation's name by default).
Show on the badge	Attendee email, organisation logo, and **Shrink long names to fit** on one line.
Registration answers	Pick answers from the sign-up form, such as company or role, reorder them, and give each its own printed label.
Layout	Click an item to edit it, drag it, or nudge it with the arrow keys; set text size, width, and position in the properties panel; snap to a grid; undo and redo. Preview with a short or long sample name.
QR code	Every badge includes the guest's own check-in QR, made on the device, so the badge can be scanned later. Keep it at least 20 mm.

Print test card prints a badge with sample data. The design is saved on this device for this event; use **Export** to save it as a file and **Import** to set up another desk the same way.

Check-in history

Every check-in and undo, online or offline, is recorded with who did it and when. Nothing is overwritten, so you can reconstruct the day if a question comes up.

CHAPTER 11

Feedback, certificates and analytics

Ask attendees how it went, reward the people who showed up with a certificate, and see the whole event in numbers.

Set up a feedback form

Event › Feedback

1. **Start from a template or blank**
   Use a template offers **Quick pulse** (2 questions), **Event review** (5), and **Session & speaker review** (4). A template closes the form so you can review it.
2. **Tailor the questions**
   Edit the title and thank-you message, and add, remove, or reorder questions. Answer types are Short answer, Long answer, Dropdown, Pick several, Pick one, Yes / no, and Number.
3. **Decide about certificates**
   Turn on the **Certificate** switch to offer a JPEG certificate after someone submits, then **Design certificate**. See below for how this changes privacy.
4. **Open the form**
   Switch the form to **Open**. It lives at `/your-org/your-event/feedback`.
5. **Share the link**
   Yuyu never emails the link on its own. Use **Copy feedback link**, or send it with the Thank you and feedback email template (Chapter 9).

Anonymous or verified?

CERTIFICATES OFF

Anonymous feedback

No email or registration identity is collected. People can respond more than once. Best for honest, low-friction feedback.

CERTIFICATES ON

Verified feedback

The respondent enters the email they registered with, which must match a guest who is going. After sending they can choose **Download certificate (JPG)**.

QUESTIONS CAN CHANGE SAFELY

Each response stores a snapshot of the question text and type at the time it was submitted. Editing or deleting a question later never alters what earlier respondents said.

Reading responses

Responses summarises each question without names: ratings such as Excellent to Poor show the most common answer, and number scales show the average. **Show individual responses** lists the most recent 250, and **Download CSV** exports them all. Exports are audited.

The certificate designer

1. **Choose a background**
   Upload background takes a JPEG, PNG, or WebP up to 5 MB in landscape or portrait, or keep Yuyu's default certificate. Leave out any personal data.
2. **Add layers**
   Build the certificate from up to 20 layers. **Add text** for words and **Add image** for logos, signatures, or seals (transparency is kept).
3. **Insert values**
   Text layers can include values that change per certificate: Attendee name, Event title, Event date, Organisation, and Issue date. Dates use the event's timezone.
4. **Style the text**
   Font (Classic serif, Clean sans, Monospace), size, colour, letter spacing, alignment, bold, italic, and uppercase. Line breaks are kept and long text shrinks to fit its box.
5. **Arrange**
   Drag layers (they snap to the centre), resize them, nudge with the arrow keys, or type exact positions. Bring layers forward or send them back, duplicate, or delete. Yuyu warns you if no layer shows the attendee's name.
6. **Preview and save**
   Enter a long **Preview attendee name** and choose **Generate exact preview**; the server renders it exactly as attendees will receive it. Then save the feedback settings.

Each response keeps the design that was active when it was submitted, so redesigning later only affects new certificates.

> **WHAT A CERTIFICATE PROVES**
> Eligibility is checked by matching the email of a confirmed registration, not by proving control of that inbox. For certificates that carry real-world value, pair them with a verified attendee list of your own.

Analytics

Event › Analytics

Live numbers while the event is coming up; final numbers once it has ended.

- **Key numbers:** Going (and places left), Waitlist, Waiting for approval (with **Review**), and Turnout.
- **From sign-up to thank-you:** a funnel of *Responded* (everyone who registered or asked to join), *Going*, *Checked in*, and *Gave feedback*. Each bar is measured against everyone who responded, and each step shows its share of the previous one, never over 100%. Later steps fill in after the event.
- **Where every response stands:** the split between Going, Waitlist, Waiting for approval, and Declined.
- **When people signed up:** sign-ups per day in the event's timezone, with the total, the daily average, and the busiest day.

The event report

Once the event has ended, owners and admins can choose **Download report (PDF)** on the Analytics tab or **Download PDF report** in the header. The report opens with the event itself and covers attendance, sign-ups over time, arrivals at the door, the programme, feedback, registration answers, and emails and team, and says when it was generated. It contains counts only: no guest is named.

CHAPTER 12

For attendees

You do not need an account to attend a Yuyu event. This chapter is written for the people who register, and organisers may want to share it.

Finding an event

- Browse `/discover` for upcoming public events. Search by title, tag, or organiser, filter by dates (This week, This month, or your own range), and sort by Upcoming or Popular.
- An organisation's page (`/their-name`) lists everything they have published.
- Some events are shared by private link, short link, or invitation only and will not appear in search.

Registering

1. **Open the event page**
   Read the details, programme, venue directions, and FAQ.
2. **Choose the register button**
   It reads **Register — it's free**, **Join the waitlist** when the event is full, or **Request to join** when the organiser approves each sign-up.
3. **Fill in the form**
   Enter your name and email, plus any questions the organiser added. Some questions only appear after certain answers. If you are signed in, your details are prefilled.
4. **Submit**
   You will be **Confirmed** (you have a place), **Waitlisted** (you will be moved up automatically if space opens), or **Pending approval** (the organiser will review).
5. **Check your inbox**
   Confirmed registrations receive an email with your ticket link and a calendar invitation you can add to Google Calendar, Outlook, or Apple Calendar.

> **ONE REGISTRATION PER PERSON**
> You can only register once per event with the same email or account. If you need to change an answer, ask the organiser; they can edit it for you.

Your ticket

Your ticket page shows a QR code. At the door, show it on your phone or let staff paste your ticket link. **Add to calendar** adds the event to Google Calendar and **Save ticket** downloads a copy. If the event

has a map link, tap the venue for directions. When you are checked in, the ticket tears off its stub and says *You're checked in*. Keep the link private; it is your proof of registration.

Cancelling

Use **Can't make it? Cancel registration** on your ticket page, or **Cancel registration** in your account's Registrations page. This frees your place for someone on the waitlist. You cannot cancel after you have been checked in. You can register again later if sign-ups are still open and there is space.

Feedback and certificates

After the event the organiser may share a feedback link. If a certificate is offered, enter the email you registered with; after sending you can download a JPEG certificate. Signed-in attendees also find their certificates under **Account › Registrations**.

Creating an account (optional)

An account prefills your details, keeps all your tickets and certificates in one place, lets you **Download my data**, and is required if you want to organise events or help at the door. See Chapter 2.

CHAPTER 13

Instance administration

One account per installation is designated as the super-admin. It configures services for everyone and watches over delivery, security, and storage. This chapter is a tour; deployment itself is covered in the technical documentation.

Getting in

1. **Be the configured account**
   Only the verified email set as the instance's super-admin can enter `/super-admin`. Everyone else sees a normal "not found" page.
2. **Turn on two-step verification**
   From **Account › Security**. The super-admin area is not available without an authenticator.
3. **Pass the step-up check**
   Yuyu asks you to *Verify super-admin access* with a fresh six-digit code. The check lasts 10 minutes, after which you are asked again.

The super-admin area

The super-admin area has its own top bar instead of the dashboard sidebar, with **Back to dashboard** and your account menu on the right and a row of sections below. Pages are read-only views unless noted, and never show passwords, tokens, registration answers, or message bodies.

Section	What you can do
Overview	Installation-wide counts, a **Needs attention** panel (failed or slow email, owners and admins without two-step verification, unverified accounts), and recent activity.
Activity	Growth and usage over the last 30 days: new users, organisations, events, registrations, check-ins, and feedback; busiest organisations and events starting soon.
Monitoring	Health checks and in-memory request stats for this server.
Operations	Backup posture and queue health, with **Deliver queued email**, **Retry failed email**, **Purge expired tokens**, and **Record restore drill**.
Email	The email queue by message type, failures, top senders, and recent broadcasts (subject and audience only).
Audit log	Searchable history of security and business actions across all organisations, with sensitive values redacted.

Section	What you can do
Organisations	Every organisation; open one for its members, events, invite links, API clients, and recent activity.
Events	All events across the installation.
Users	Every account, filterable by unverified email or two-step status; open one for its organisations, recent registrations, and actions.
Auth	The **New account creation** switch. When off, existing users can still sign in with a password or Google.
Security	Two-step adoption, sign-in methods, recent sensitive activity, and machine API clients (never their secrets).
Settings	Instance settings for email delivery, Google sign-in, and backup status.
Invites	Organisation invite links and event and series invites.
Storage	Database size, uploaded files, and each organisation's footprint.

Instance settings

SMTP Sender address, service or host, port, username, and password, with options for implicit TLS or a private relay. Values saved here override anything configured on the server. The password is write-only: it is encrypted and never shown again; leave the field blank to keep it.

Google SSO OAuth client ID and client secret from Google Cloud. Saving both makes the Google button appear on the sign-in page at once; no restart is required.

Backup configuration Provider, last successful backup, and retention days. These fields only record your backup posture. Yuyu does not run or restore backups; your database provider does.

How email delivery works

Yuyu never sends email while an attendee is waiting. Every message is queued and a background worker sends it within about a minute, retrying on temporary failures. The Operations and Email sections show the queue; if it looks stale, check the server and the SMTP settings. Messages that contain private links are deleted from the queue once delivered.

Notes for whoever runs the server

- **Public address:** set `NEXT_PUBLIC_BASE_URL` to the site's public address (the same as `AUTH_URL`). Emails use it for every link and image; without it, delivered emails leave out the event cover,

organisation logo, and site links, even though the dashboard preview looks right. Changing it needs a rebuild.

- **Redis:** `REDIS_URL` is required in production. Besides rate limits, it carries live check-in updates to tickets, so run more than one replica only with a shared Redis.
- **Reverse proxy:** the live ticket update stream must not be buffered (for nginx, `proxy_buffering off`) and must allow idle reads of at least 30 seconds. A buffering proxy delays the ticket tear until the page's regular status check.
- **Embeds:** list the websites allowed to embed event pages in `ALLOWED_EMBED_ORIGINS`; leave it blank to block embedding.

> **KEEP SECRETS OUT OF CHAT**
>
> SMTP passwords, Google secrets, and server keys should only ever be typed into the Settings form or a secrets manager. If one is pasted somewhere public, rotate it.

CHAPTER 14

Connecting other tools (API)

Organisation owners can let an external system read event details and a minimal attendance list. The API is deliberately small and privacy-preserving.

Create an API client

Dashboard › Organisation › Settings › Manage API access

1. **Sign in recently**
   Changes to API access need a recent sign-in. If Yuyu asks, sign out and in again first.
2. **Name the client**
   Under **Create API client**, give an application name such as “Badge printer” or “Community dashboard”.
3. **Choose scopes**
   See the table. Grant only what the tool needs.
4. **Copy the credential**
   Give the credential a label and an optional expiry, then **Create client**. The secret is shown **once**. Copy it into the consuming tool’s secret store and choose **I have stored it**.

To rotate, use **Create rotation credential**, switch the tool over, check that it works, then **Revoke** the old one. **Disable client** stops all its credentials immediately.

Scopes

Scope	Allows
`events:read`	List and read the organisation’s standalone events (title, dates, status, privacy, and similar).
`participants:read`	Read confirmed participants as display name and registration time only. May filter by checked in or not.
`participants:attendance:read`	Together with the scope above, include the check-in time.

Participant responses never include email addresses, form answers, user IDs, or ticket codes.

Calling the API

```
GET /api/v1/events?limit=50
GET /api/v1/events/<eventId>
GET /api/v1/events/<eventId>/participants?attendance=checked_in&include=attendance

Authorization: Bearer <credential>
```

Collections are paginated with a `nextCursor`; pass it back unchanged to get the next page. Errors share one shape with a code such as `INVALID_CREDENTIAL`, `INSUFFICIENT_SCOPE`, `RESOURCE_NOT_FOUND`, or `RATE_LIMITED`. A developer reference sits below the client list, and full details are in the API reference in the technical documentation.

CHAPTER 15

Troubleshooting and FAQ

Most problems have a one-line answer. Scan the question column, then follow the fix.

Problem	Likely cause and fix
I can't sign in; it says to verify my email.	Open the verification link from the sign-up email (it lasts one hour) or use **Resend verification email**.
My event isn't in Discover or search.	Check Publishing: it must be **Live** and found by **Everyone**. Events for people with the link or invited people only are never listed.
Attendees say registration is closed.	Look at **Close sign-ups** in Publishing, check the spots, and confirm the event hasn't ended.
Someone can't register for an invite-only event.	Their email must be on **Guests › Invites**. Add it, then ask them to try again.
A registration says "already registered".	That email or account already has a registration, possibly on the waitlist. Search for it on Guests.
The short link stopped working.	Someone chose **Regenerate**, or the event is not live. Copy the current short link from the Share card on Overview.
A ticket won't scan.	Only guests who are going have tickets. Check the status; give a spot from the waitlist or use **Override waitlist** if appropriate. Also try **Manual code**.
The camera doesn't open on the check-in desk.	Allow camera access in the browser's site settings. The page must be served over HTTPS.
The door station says it can't be opened.	The station is only available from 24 hours before the start until 1 hour after the end, and an admin may have turned it off.
Volunteers were logged out of the station.	Someone created a **New PIN**. Share the new PIN.
The badge prints at the wrong size.	Print at 100% (actual size) with no headers or footers, and check the badge stock in the designer matches your cards.
The ticket doesn't tear when the guest is checked in.	It updates within seconds; if it takes about 15 seconds, the server's reverse proxy is buffering live updates (Chapter 13).

Problem	Likely cause and fix
Emails arrive without the cover photo or logo.	The server is missing `NEXT_PUBLIC_BASE_URL`. Ask whoever runs the server to set it (Chapter 13).
Confirmation emails aren't arriving.	Ask attendees to check spam first. Then the super-admin should check the Email and Operations sections for failed messages and verify the SMTP settings.
I sent an email by mistake.	Choose **Undo** during the five-second countdown. Once delivery starts, emails can't be recalled.
I removed the wrong guest.	Choose **Undo** in the confirmation message straight away. After that, add them again with **Add guest**.
A delay shifted sessions in another room.	Delays only affect one track. Check the sessions are assigned to the correct tracks.
Feedback asks for an email but I wanted it anonymous.	Turn off the **Certificate** switch. Certificates require a matching registration.
The name on the certificate is cut off.	Open the designer, enter a long preview name, and widen the name layer or reduce its font size.
I can't leave an organisation.	You are its only owner. Ownership can't be transferred yet, so the only owner can leave only by deleting the organisation.
I lost my authenticator phone.	Sign in with a recovery code, then turn two-step verification off and on again with the new device. If you have no codes, the super-admin cannot bypass it; contact your administrator.
The super-admin page says not found.	You are not signed in as the configured super-admin email, or that email isn't verified.
The super-admin page keeps asking for a code.	The step-up lasts 10 minutes. Wait for a fresh code; a code can't be reused from the sign-in prompt.
Can I sell tickets?	No. Yuyu is for free events only.

Privacy and data notes

- ✓ Exports of attendee data are logged in the audit trail.
- ✓ Uploaded images are stripped of metadata.
- ✓ Anonymous feedback stores no identity at all.
- ✓ Ticket, certificate, and invite links are never logged.

- ✓ Offline guest lists stay on the device until removed.
- ✓ Download my data never includes passwords or ticket links.
- ✓ The event report contains counts only.
- ✓ Deleting an event or organisation is permanent.

CHAPTER 16

Quick reference

Print this chapter for the team. It condenses the manual into checklists you can tick off. The readiness card on each event's Overview tracks many of these for you.

Before you publish

- ✓ Title, tagline, and About text are final.
- ✓ Dates, timezone, and venue or online link are correct.
- ✓ Spots and Close sign-ups are set.
- ✓ Who can find it and approval match your plan.
- ✓ Registration questions are added and ordered.
- ✓ Cover photo, logo, and colour are set.
- ✓ Speakers, sponsors, and FAQ are published.
- ✓ Programme tracks have no same-track overlaps.

The week before

- ✓ Review people waiting for approval and the waitlist.
- ✓ Add invites if the event is for invited people only.
- ✓ Send a reminder from the Emails tab (test it first).
- ✓ Invite co-organisers for door staff with Check-in.
- ✓ Turn on the door station and brief volunteers.
- ✓ Design the badge and print a test card.
- ✓ Create a short link for posters and slides.
- ✓ Prepare the feedback form from a template (keep it closed).

On the day

- ✓ Make the guest list available offline on each device.
- ✓ Test one scan and one undo before doors open.
- ✓ Switch on ID card printing if you print badges.
- ✓ Use live delays when the schedule slips.
- ✓ Sync offline check-ins when connectivity returns.
- ✓ Turn off the door station after close.
- ✓ Remove offline data from shared devices.

After the event

- ✓ Open the feedback form and email the link with the Thank you and feedback template.
- ✓ Download the PDF report from Analytics.
- ✓ Export feedback responses as CSV.
- ✓ Clone the event for next time (Settings › Run it again).

Glossary

Approve each sign-up	A Publishing switch that makes every registration wait for an organiser's decision.
Co-organiser	Someone with specific permissions on one event who is not a member of the organisation.
Close sign-ups	The moment registration closes: at the end, a set time before the start, or an exact time.
Door station	The PIN-protected check-in page for volunteers without an account.
Draft, Live, Offline	Whether an event is private to your team, public, or taken down.
Instance	One occurrence of a recurring series. Also used for one installation of Yuyu.
Invite list	The email addresses permitted to register for an invite-only event or series.
Live delay	Minutes added to a session and every later session in the same track on the day.
Offline guest list	A copy of the guest list stored on a check-in device for use without a connection.
Outbox	Yuyu's email queue; messages are sent by a background worker and retried if needed.
Scope	A named permission granted to an API client.
Short link	A seven-character link that always points at an event's current page.
Step-up	The extra authenticator check required to enter the super-admin area.
Track	A parallel lane in the programme, such as a room or stream.
Waitlist	The ordered queue of registrations beyond the spots, moved up automatically as places free up.

Yuyu is developed in the open at github.com/twilighty-abhi/yuyu. Technical setup, configuration, security, and API references live in the project's `docs/` folder.
